Human precursor plasminogen activator inhibitor (PAI-2) having specified amino acid sequence and human mature PAI2 (23(5) to 415(P)) sequences are claimed. Fure DNA coding for human precursor PAI-2 and human mature PAI-2, a transfer vector pcD1214 as available in E. coli HB101 (pcD1214) (NRRL B-18161), transformed host cells (mammalian and yeast), and a method of culturing the transformed cells to produce PAI-2 are claimed. PAI-2 may have utility as a substitute for epsilon-aminocaproic acid (epsilon-ACA). The PAI-2 gene can be used as a probe to locate the gene coding for a PAI-2 or PAI-2-like activity. The PAI-2 can also be used to produce antibodies used in diagnostic assays. (Updated on 25-MAR-2003 to correct PA field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CAATGGAGGAGCATCTTTGTGTGGCAAACACACTCTTTGCCCTCAATTTATTCAAGCATCTGG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AACTIGITACCIGAAGGITCIGIAGAIGGGAIACCAGGAIGGICGIGGAAAGCIGGIC
                                                                                                                                                                                                                 The sequence was obtd. from the combined sequences of lambda PAI-75.1 lambda PAI75.15, both isolated from a placental CDNA library. A recombinant vector contg. the DNA can be used to express PAI-2 which inhibits the conversion of plasminogen to plasmin and is used as an anticoagulant. (Updated on 25-MAR-2003 to correct PA field.)

Compounds which modulate the opporteins of the invention may have cytostatic, antiinflammatory, ophthalmological antiateriosclerotic or valnerary activities. The sequences of the invention may be useful for gene therapy. The invention may be useful for gene therapy. The invention as tumourigenesis, anglogenesis, apoptosis, inflammation, erythoropoiesis, or the biological response to hypoxia conditions including processes such as glycolysis, gluconegenesis, glucose transportation, catecholamine synthesis, iron transport or nitric oxide synthesis the disease includes cancer, ischemic conditions, reperfusion injury, retinopathy, necestal sections or wound healing, the present sequence is that of the invention of the invention of the invention of the conditions.

```
Minactivin is produced by induced human monocytes, certain macrophages and transformed cells of monocytic lineage (see WO 86/01212). Using the AA sequence obtd. for peptides of minactivin, oligonucleotide probes can be syntheasleed, (see AAN70467- AAN70473, and AAN71181-N71183). The specific oligonucleotide probe may be radiolabelled and then used to screen cDNA libraries to identify clones contg. all or part of the minactivin gene. (Updated on 25-WAR-2003 to correct PI field.)
                                                                                                                                                                                                                                                                              DNA sequence encoding minactivin - used for monitoring and treating tumours and chronic inflammation such as rheumatoid arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 2409 BP; 743 A; 500 C; 508 G; 658 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Commercially available human placental cDNA bank in lambda gt11 phage was used to transform E.coli Y1090 and culture supernatants from the transformants screened by reaction with mouse Ab. against PA12. Clone lambda-plc 1 was one of 6 clones isolated. Pa12 is a strong and specific inhibitor for the active forms of PA so is used to treat or prevent disorders associated with abnormal levels of PA. PA is implicated in hamomal levels of PA. PA is implicated in macrophage migration and inflammatory processes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           344
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              TIGCAGGCACAAGCIGCAGAIAAAAICCAIICAICCIICCGCICTCAGCICTGCAAIC 404

Prepn. of plasminogen activator inhibitor-2 - by fermentation of a fungal cell transformed with a genetic construct which expresses the plasminogen activator inhibitor-2.
                                                                                                                                                                                                                                                                                                                                          A lambda gt11 cDNA library constructed from phorbol-12-myristate-13-acetate stimulated cells of the human monocyte-11ke historytic lymphoma cell line 1937 was screened. (See AAQ10850 and AAQ1081 for the probe sequences). From the putative positive clones, one was selected (lambda gt11-186) which appeared to contain the entire PAI-2 coding region. The insert was cloned in Mi3mp19 to give pDBP1 and was sequenced. (Updated on 25-MAR-2003 to correct PA field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 1412 BP; 418 A; 311 C; 323 G; 360 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                              1401
                                                                                                                                                                                                                                                                                       The variant has amino acids 74-96 deleted, It retains the biological activity while lacking protease sensitivity of native PAI-2. The variant is preped. by alteration of the DNA encoding PAI-2 and expression in hosts. The Hinfl-Pil segment spanning the protease sensitive site in PAI-2 was replaced by synthetic oligonucleotides with cohesive Hinfl and Patl ends, creating a variant PAI-2 in which amino acids 74-96 inclusive were deleted. See also AAQ11620. (Updated on 09-JAN-2003 to add missing S field.)

                                                                                  The variant has amino acids 66-98 deleted. It retains the biological activity while lacking protease sensitivity of native PAI-2. The variant is prepd. by alteration of the DNA encoding PAI-2 and expression in hosts. DNA sequences encoding amino acids 66-98 were deleted from PAI-2 using the PCR technique of site-directed mutagenesis by overlap extension. See also AAQ11619. (Updated on 09-JAN-2003 to add missing OS field.)

Addition of a signal sequence to PAI-2 not only facilitates secretion of the glycosylated 60 kD form of PAI-2 but also directs correct processing of the signal. The signal-contg. variant was constructed such that the artificial signal was fused to the NH2- terminal methionine of PAI-2. Correct cellular processing of this signal peptide should result in a mature PAI-2 molecule of 41s amino acids with Met at its NH2-terminus. See AAQ11129 for PAI-2 with the alpha-1-antitrypsin signal sequence.
                                                                                                                                                                                                          Prepn. of glycosylated plasminogen activator inhibitor-2 (PAI-2) diagnosis and treatment of tumours, and in treatment of immuno:suppressant conditions and inflammation.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Addition of a signal sequence to PAI-2 not only facilitates secretion of the glycosylated 60 kD form of PAI-2 but also directs correct processing of the signal. The signal-contg. variant was constructed such that the human alph-1-antitrypsin signal was fused to PAI-2 without its NH2-terminal methionine. Correct cellular processing of this signal peptide should result in a macure PAI-2 molecule of 414 maino acids with Glu at its NH2-terminus. See AAQ11128 for PAI-2 with a synthetic signal sequence.                                                                                                                                                                                                                                                                                                                                                                                                                                                          A PAI-2 positive clone was isolated after screening a library (see AAQ21117-8). A BglII site was created at the 5' end of the gene to create a mutation in the third position of the second codon. A AlfII site was created at the 3' end to create mutations in the third position of the last codon and in the first base of the stop codon. A clone derived from this procedure was designated pDBP2. Two linkers were ligated with the BglII-AfIII PAI-2 gene fragment from pDBP2 into HindII + BAmHI digested milmpl9 to form pDBP3. See also AAQ21117-19 and AAQ21121-25. (Updated on 25-MAR-2003 to correct PA field.)
                                                                                                                                                                                                                                                                                                                                Antitumour molecules for treatment of neoplasms - comprises first region for binding to uPA receptor and second region for uPA inhibition.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                58 AAACAATGGAGGATCTTTGTGTGGCAAACACACTCTTTGCCCTCAATTTATTCAAGCATC

Determining a toxicological response to an agent, useful for screening of drugs, comprises comparing the expression profile of one or more human toxic response genes to a reference gene expression profile indicative of toxicity.

Claim 1; Page 298; 455pp; English

The present invention describes a method (M1) for determining a toxicological response to an agent, which comprises comparing the expression profile of one or more human toxic response genes. to a reference gene expression profile indicative of toxicity, and so determining the presence of a toxic response to the agent. Also determining the presence of a toxic response to the agent. Also cermining the presence of a toxic response to the agent. Also from the genes corresponding to the partial sequences given in ABZ82842 to ABZ84764, or their fragments of at least 20 nucleotides, or homologues cresponse gene plays a role on toxic response pathways by determining the response gene plays a role on toxic response pathways by determining the expression profile of the gene after exposure of calls or a human subject to a known toxic pharmaceutical or industrial agent, comprising: (a) exposing cells to an agent or isolating the test gene expression profile of toxic response gene after exposure to a known toxic pharmaceutical or industrial agent; and (c) comparing the test comparing the test profile of toxic response gene after exposure to a known toxic pharmaceutical or industrial agent; and (c) comparing the test profile of the expression profile of that gene after exposure to other known toxic compounds. The methods are useful for exposure to other known toxic compounds. The methods are useful for toxic toxic toxic responses on a cellular, organized toxic response and ensured for toxic compounds and cellular, organic corresponding of drugs, pharmaceutical compounds and chemicals

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 1188, Application US/09023655

Sequence 1188, Application US/09023655

Patent No. 6607879

GENERAL INFORMATION:
APPLICANT: Cocks, Benjamin G.
APPLICANT: Jeffrey J. Seilhamer
TITLE OF INVENTION: EXPRESSION
NUMBER OF SEQUENCES: 1508

CORRESPONDENCE ADDRESS: ADDRESS: ADDRESSE: NUTTE PHARMACEUTICALS, INC.

                                                                                                                                                                                                                                    GENERAL INFORMATION:

GENERAL INFORMATION:

TITLE OF INVENTION: Human Monocyte Elastase Inhibitor

NUMBER OF SEQUENCES: 16

COURRESPONDENCE ADDRESS: 16

CONDESSEE: Wolf, Greenfield & Sacks, P.C.

STREET: 600 Atlantic Ave.

STREET: 600 Atlantic Ave.

CITY: Boston

STRATE: MA

COUNTRY: USA

CONPUTER FEDABLE FORM:

MEDIUM TYPE: Floppy disk

COMPUTER: IBM PC compatible

OPERATION TYPE: Ploppy disk

COMPUTER: IBM PC compatible

OPERATION SYSTEM: PC-DOS/MS-DOS

SOFTWAREN PAPPLICATION DATA:

APPLICATION NUMBER: US/08/662,318

FILING DATE: September 30, 1994

ATTORNEY/AGENT INFORMATION:

NAME: Plumer, Elizabeth R. R.

NAME: Dumer, Elizabeth R. R.

NAME: Dumer, Elizabeth R. R.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match
